ISO 55000 - Are You Ready?

The International Standards Organisation (ISO) will release the ISO 55000 series of standards on asset management early in 2014. ISO 55000 will replace the PAS 55 specification for Asset Management that has been adopted by a large number of organisations globally.

No matter what the current level of Asset Management maturity is within your organisation, before attempting to align your Asset Management systems and processes with good practice (as outlined in ISO 55000) it is important that you understand just how big or small a task that will be.

In order to maximise the chances of success of an Asset Management improvement and certification initiative, we suggest that a high level Readiness Assessment be performed as the first step in this process. This results in a set of actionable recommendations that can be used to develop a roadmap towards asset management excellence within your organisation.

Book your Readiness Assessment today on: 1300 ASSETI
(1300 277 384)

The Readiness Assessment Covers:

The readiness assessment covers the following:

Management System & Context

The assessment will check for an understanding of context and alignment with the business context; clear definition of roles and responsibilities; assess the use of decision making criteria and a clear scope for the management system.

Leadership

The assessment will cover the level of leadership commitment towards asset management and the publication and implementation of an Asset Management Policy and Strategy. It will also assess if roles and responsibilities are clearly defined.

Planning

The assessment will cover the existence of plans for its asset portfolio, how these align with the organisation's goals and objectives, and how these plans are developed.

Support Elements

The assessment will evaluate the capability and capacity of supporting elements including resources, competence, communication, information and documentation.

Operational Control

The processes for managing and controlling operations and maintenance activities will be evaluated, as well as the processes for managing technical change and for managing outsourced activities.

Performance Evaluation

The systems for monitoring and evaluating performance and conformance with asset management system requirements will be assessed.

Improvement

The readiness assessment will review the organisation's processes for dealing with non-conformity, preventive actions and continual improvement of its performance and its asset management system.

BENEFITS

The readiness assessment will result in the following benefits to the organisation:

- A better understanding of the ISO management system requirements
- An understanding of the major gaps in their current management system.
- A set of actionable recommendations that can be used to develop a roadmap towards asset management excellence or ultimately certification.

READINESS ASSESSMENT APPROACH

The readiness assessment will be conducted in four stages:

- Kick-off and scoping
- Request for documentation and desktop review.
- Assessment interviews of key personnel.
- Reporting
